

ABSTRACT

A client system obtains data content or is linked to data processing systems related to user selected data content within a portable document file. The client system comprises a browser system for receiving an HTTP package containing a first portable document file, the first portable document file comprising display class data content selectable by the user and related hidden class data content. The client system further comprises a display module for displaying the display class data content on a display screen associated with the client system. The client system further comprises a message module for building a message in response to user selection of display class data content, sending the message to a message server, and receiving a second HTTP package containing a portable document file from the message server. The message comprises identification of the first portable document file and hidden class data content related to user selected display class data content;
